NEW Year New Features!

We are constantly working to make your Safety Meeting App experience the best it can be and always love to hear your feedback. You asked and we delivered! We've rolled out some great new features and functions to make your safety compliance reporting even easier.

Incident Documentation

New Data Fields

We've added some new data fields to our incident reporting feature. You can now enter:

- Incident Type
- Reporter
- Employment Status
- Project
- Medical Attention Required

These fields are all optional, but are a great way to make sure you include all pertinent information in your incident reports.

CSV Export

Another new feature that we've added to our incidents reporting section is the ability to export incident data in a CSV format.

Under the reports section of the app portal you can create a CSV file for a desired date range. This data can be easily integrated into an existing Excel file.

Meetings

Leader Signature

You can now add a leader's signature directly from the app when creating a meeting! This signature will then appear in the meeting report

Reorganize Your Data

Did you know you can organize your meetings by any of the information fields?. Simply double click a field header to reorganize your data by that field.
